AMENDMENTS IN THE CLAIMS:

The listing of claims will replace all prior versions, and listings, of the claims in the application:

Listing of Claims:

- 1. (Previously presented) A fastener assembly comprising:
 - a plate having a bearing surface and an oppositely disposed top surface; a stud held within said plate, said stud having a pointed end, an oppositely disposed head, and a shank, said head being disposed above said top surface, and a substantial portion of said shank being disposed above said top surface of said plate so that said stud may be received in the barrel of a power actuated gun; and
 - an extending portion extending from the bearing surface and away from the head of the stud; wherein said plate further comprises a groove corresponding in location to said extending portion.
- 2. (Canceled)
- 3. (Original) A fastener assembly as in claim 1 further comprising: an attachment leg angularly attached to said plate.
- (Original) A fastener assembly as in claim 3 wherein:
 said extending portion extends parallel to a plane of said attachment leg.
- (Original) A fastener assembly as in claim 1 further comprising: said plate comprises a raised portion.
- 6. (Withdrawn) A fastener assembly as in claim 1 further comprising: a cone formed on said plate, said cone holding said stud.
- 7. (Withdrawn) A fastener assembly as in claim 5 wherein: said stud does not extend below the bearing surface.

- 8. (Previously presented) A fastener assembly as in claim 5 wherein: said stud extends below the bearing surface.
- (Previously presented) A fastener assembly as in claim 1 wherein:
 the extending portion further serves as guide means, formed in said plate, for guiding the fastener assembly in a track.
- (Original) A fastener assembly as in claim 5 further comprising:
 means, formed in said plate, for assisting collapse of the raised portion.
- 11. (Previously presented) A fastener assembly comprising:

a plate having a bearing surface and an oppositely disposed top surface; a stud held within said plate, said stud having a pointed end, an oppositely disposed head, and a shank, said head being disposed above said top surface; and

guide means, placed on said plate, for guiding the fastener assembly within a track, said guide means comprising an extending portion extending from the bearing surface and away from the head of the stud.

- 12. (Previously presented) A fastener assembly comprising:
 - a plate having a bearing surface;
 - a stud held within said plate; and

guide means, placed on said plate, for guiding the fastener assembly within a track; wherein

said guide means comprises a groove.

- 13. (Withdrawn) A fastener assembly comprising:
 - a plate having a bearing surface;
 - a stud held within said plate; and

guide means, placed on said plate, for guiding the fastener assembly within a track; wherein

'said guide means comprises a tab.

PATENT

S/N: 10/043,669
Attorney Docket No. SST/1305
Response to Office Action Mailed:9/2/04

- 14. (Original) A fastener assembly as in claim 11 further comprising: a raised portion formed in said plate.
- 15. (Original) A fastener assembly as in claim 12 further comprising: an attachment leg angularly attached to said plate, and said groove extends parallel to a plane of said attachment leg.
- 16. (Original) A fastener assembly comprising:
 - a plate having a raised portion;
 - a stud held within said plate; and
 - a plurality of grooves formed within the raised portion of said plate, whereby said plurality of grooves assists the raised portion to collapse when the fastener assembly is driven by a power actuated gun.
- 17. (Withdrawn) A fastener assembly as in claim 16 wherein: the raised portion of said plate has a substantially rectangular cross section.
- 18. (Withdrawn) A fastener assembly as in claim 17 wherein: one of said plurality of grooves is placed at each corner of said rectangular cross section.
- (Original) A fastener assembly as in claim 16 wherein:
 the raised portion of said plate comprises a portion of a cylinder.
- 20. (Original) A fastener assembly feeding system for use with a power actuated gun comprising:
 - a plate;
 - a stud held within said plate;
 - an extending portion formed on said plate;
 - a feeding track; and
 - a mating portion formed on said track, said mating portion complementing said extending portion,
 - whereby the fastener is guided along said feeding track.

21. (Previously presented) A fastener feeding system for use with a power actuated gun as in claim 20 wherein:

said extending portion comprises a groove.

22. (Previously presented) A fastener feeding system for use with a power actuated gun as in claim 20 further comprising:

an attachment leg angularly attached to said plate.

23. (Previously presented) A fastener feeding system for use with power a power actuated gun as in claim 20 wherein:

said plate has a raised portion.

24. (Withdrawn) A fastener assembly feeding system for use with a power actuated gun comprising:

a plate having a bearing leg with a raised portion and an attachment leg;

a stud frictionally held within the raised portion of said bearing leg;

a groove placed within said bearing leg between said stud and said attachment

leg, said groove extending parallel to a plane of the attachment leg;

a foot formed on one edge of said bearing leg;

a tab formed in said bearing leg and extending in a direction opposite to said foot;

a track portion adapted to receive said plate;

a mating portion formed in said track portion, said mating portion complementing and adapted to receive said groove; and

a channel formed with said track portion, said channel adapted to receive said tab,

whereby a plurality of fastener assemblies are guided along said track.

- 25. (Previously presented) A fastener assembly as in claimed 12 further comprising: a raised portion formed in said plate.
- 26. (Withdrawn) A fastener assembly as in claim 13 further comprising:

a raised portion formed in said plate.

- 27. (Previously presented) A fastener assembly as in claim 5, further comprising: an attachment leg angularly attached to said plate.
- 28. (Previously presented) A fastener assembly as in claim 27, wherein: said extending portion extends parallel to a plane of said attachment leg.
- 29. (Previously presented) A fastener assembly as in claim 28, wherein: a plurality of grooves are formed within the raised portion of said plate, whereby said plurality of grooves assists the raised portion to collapse when the fastener assembly is driven by a power actuated gun.
- 30. (Previously presented) A fastener assembly as in claim 29, wherein: the raised portion of said plate comprises a portion of a cylinder.
- 31. (Previously presented) A fastener assembly as in claim 5, wherein: a plurality of grooves are formed within the raised portion of said plate, whereby said plurality of grooves assists the raised portion to collapse when the fastener assembly is driven by a power actuated gun.
- 32. (Previously presented) A fastener assembly as in claim 31, wherein: the raised portion of said plate comprises a portion of a cylinder.
- 33. (Previously presented) A fastener assembly as in claim 14, further comprising: an attachment leg angularly attached to said plate.
- 34. (Previously presented) A fastener assembly as in claim 33, wherein: said extending portion extends parallel to a plane of said attachment leg.
- 35. (Previously presented) A fastener assembly as in claim 34, wherein:

a plurality of grooves are formed within the raised portion of said plate, whereby said plurality of grooves assists the raised portion to collapse when the fastener assembly is driven by a power actuated gun.

- 36. (Previously presented) A fastener assembly as in claim 35, wherein: the raised portion of said plate comprises a portion of a cylinder.
- 37. (Previously presented) A fastener assembly as in claim 14, wherein: a plurality of grooves are formed within the raised portion of said plate, whereby said plurality of grooves assists the raised portion to collapse when the fastener assembly is driven by a power actuated gun.
- 38. (Previously presented) A fastener assembly as in claim 37, wherein: the raised portion of said plate comprises a portion of a cylinder.
- 39. (Previously presented) A fastener assembly as in claim 12, wherein: said plate comprises a raised portion
- 40. (Previously presented) A fastener assembly as in claim 12, further comprising: an attachment leg angularly attached to said plate.
- 41. (Previously presented) A fastener assembly as in claim 40, wherein: said groove extends parallel to a plane of said attachment leg.
- 42. (Previously presented) A fastener assembly as in claim 41, wherein: a plurality of grooves are formed within the raised portion of said plate, whereby said plurality of grooves assists the raised portion to collapse when the fastener assembly is driven by a power actuated gun.
- 43. (Previously presented) A fastener assembly as in claim 42, wherein: the raised portion of said plate comprises a portion of a cylinder.
- 44. (Previously presented) A fastener assembly as in claim 39, wherein:

Response to Office Action Mailed:9/2/04

a plurality of grooves are formed within the raised portion of said plate, whereby said plurality of grooves assists the raised portion to collapse when the fastener assembly is driven by a power actuated gun.

- 45. (Previously presented) A fastener assembly as in claim 44, wherein: the raised portion of said plate comprises a portion of a cylinder.
- 46. (Previously presented) A fastener assembly as in claim 16, further comprising: an attachment leg angularly attached to said plate.
- 47. (Previously presented) A fastener assembly as in claim 46, wherein: said groove extends parallel to a plane of said attachment leg.
- 48. (Previously presented) A fastener assembly as in claim 47, wherein: the raised portion of said plate comprises a portion of a cylinder.
- 49. (Previously presented) A fastener assembly as in claim 23, wherein:
 a plurality of grooves are formed within the raised portion of said plate, whereby said plurality of grooves assists the raised portion to collapse when the fastener assembly is driven by a power actuated gun.
- 50. (Previously presented) A fastener assembly as in claim 49, further comprising: an attachment leg angularly attached to said plate.
- 51. (Previously presented) A fastener assembly as in claim 50, wherein: said groove extends parallel to a plane of said attachment leg.
- 52. (Previously presented) A fastener assembly as in claim 51, wherein: the raised portion of said plate comprises a portion of a cylinder.
